

Plugin Report

By: Mardhiah Azhar

You will then need to write a report on your use of plugins explaining:

- The current issues with your website (What are your problems? Why do you need plugins?).
- What type of plugins will solve your issue and why? (Don't specify a name of a plugin provider, instead, specify the type of the plugin. For example, instead of stating "Elementor", state "front-end page builder plugin").
- Your choice of plugin provider and why you chose one plugin provider over the others (for example: Elementor vs Divi).
- The high-level steps of how you implemented each plugin
- The applicable benefits realized or expected to be realized after implementing each plugin

At the beginning of the building the website, the homepage is all white and blank. This is not attractive and unappealing. There are a few issues that needs to be addressed in this case. The first one is that the homepage font is not attracting attention enough, as it is small and the same size as other wording in the page. This makes the "Homepage" font blends in with the background and contradicts to the purpose of the font in the first place. The homepage font supposed to create and attract attention of the audiences that visit the website. Next, the bland background and the button to direct audiences to my first entry needed to be included in the homepage.

Therefore, a few types of plugin are utilised to solve these issues. The first one is the header of the website that portrays homepage. In my opinion, the header is the first thing that viewer will see when they visited the website. Hence, it needs to be revealing, appealing and interesting enough to make viewer stays on the website. In order to choose for a decent header, the type of font and colour of the header must be consistent throughout the whole website. While The second plugin is the background theme. The next plugin is the social media layout and link layout to direct viewers to the first entry of my blog.

The preferred plugins provider that I chose is Elementor because Elementor is a plugin provider that offers convenient and easy to navigate. It also has over 200 million of active users. This number is quite appealing and gives me confidence in using Elementor. I am not endorsing the platform but, this is the only plugin provider I exposed myself to. Hence, I couldn't compare much with other providers. I would love to learn and discover more astonishing plugin providers out there. In this assignment, I used mainly Elementor to help me crete my website.

The advantages of implementing several plugins to the website is to make it appealing and attractive. Websites can also be built by writing code using html and css from scratch. However, monitoring websites using Azure and Elementor had save more times and make life so much easier. The link plugin especially allows viewers to be directed to certain destinations hustle free. Besides, there are more types of plugins that are convenient especially to business websites. For example, call-to-action widget that highlights the main agenda and theme of the website.
